CABLE FOR LIFE

CABLE MANUFACTURING SINCE 1992

Through our innovative solutions, we meet the challenges of the future and contribute to global energy supply and industrial development. Since Amokabel was founded, we have worked on technical development to exceed the high demands placed on a constantly changing market. Our ability to adapt to new technology and changing conditions has been an important factor in our development.

Thanks to close collaborations with our customers, we can meet the unique needs that exist in each industry. Our main focus has always been customer satisfaction, quality, and environmental awareness.

OUR SOLUTIONS

Our business areas are broad and dynamic. As a global manufacturer with operations in multiple countries, we can offer various solutions in marine, industrial, transport, power grid, installation, and defense sectors. The solutions we provide are cost-effective, easy to install, and highly reliable because they are specially designed for the customer's specific application.

OUR PRODUCTION

All our manufacturing companies within the group are certified according to ISO 9001, ISO 14001, and ISO 45001.

Many of our cables and wires are also certified by Intertek, DNV, and UL. To meet international standards, regular inspections are conducted by external control bodies.

Our quality and environmental manual contains the following policies:

Quality Policy: We provide products that meet customer requirements and standards with a focus on continuous improvement.

Environmental Policy: We strive for activities that reduce environmental impact in accordance with laws and permits.

Occupational Health and Safety Policy: We create a safe and healthy workplace for all employees, both physically and socially.

ENVIRONMENT

We are constantly working to reduce our impact on both society and the environment, as responsible business practices are a given for us. Since 2004, we have produced as much renewable energy annually as we have consumed through solar, wind, and hydro power.

Through wise investments in battery storage, we have expanded our capacity, allowing us to store excess energy efficiently. The battery ensures a stable energy supply during periods of low production and helps to stabilize the electricity grid, enabling more renewable energy in the Swedish electrical system.

RECYCLING OF MATERIAL

Copper

We recycle 100% of our copper and recover 94% of its value through granulation. This reduces the need for new extraction and lowers our climate impact while maintaining high material quality.

Corrugated Board

We recycle 99.7% of all corrugated board and have reduced the number of transports from 24 to 7 per year with our compactor. This optimizes our resource use and significantly reduces our environmental impact.

Wood

Return drums are inspected and reused if they meet the requirements, while those that are no longer usable are sold. This way, we contribute to a circular economy and reduce our use of new materials.

Plastic

Recycled plastic is converted into district heating through an energy-efficient process. Our machine separates plastic from the copper wire, enabling more sustainable waste management.

SOCIAL RESPONSIBILITY

We have always been engaged and view Amokabel's social responsibility as an important part of our values and operations. We care about our community and want to make a positive difference.

Through our involvement in local projects, we contribute to an active and vibrant community for all residents. It is important for us to invest in sustainable and long-term solutions so that people can thrive.

We are proud to be an integral part of our community and look forward to continuing to contribute to its growth and development together with our local partners.

We support, among other areas:

- Amo Handboll
- Local housing
- The local health center Falken
- Local sports and association activities
